Not listed are research projects I was involved in my function as research consultant in Lausanne. Total funds raised in Geneva: 2’813’387 CHF (of which 485’000 conference money).

Awards

- 2007 Prix Humbert (1000 CHF) for my logic book
- 2006 Bourse Philibert Collart (10000 CHF) for a research projet
- 2005 Lauener Prize for Young Talents in Analytic Philosophy (10000 CHF)

Dialectica

I became involved with *dialectica* in 1999, a philosophy journal founded in 1947 by Bachelard, Bernays and Gosseth, taking care of its day-to-day functioning, as well as the contact with authors and referees, and reading and evaluating (almost) every article. A year before *dialectica*'s long-time editor *Henri Lauener* died in 2002, I started collaborating with *Gianfranco Soldati*, appointed in 2000 to the University of Fribourg. Together, we managed to get *dialectica* published by Blackwell-Wiley and reduced the acceptance rate from over 20% to 8% (while the number of submissions tripled). After *Pascal Engel*, professor of modern and contemporary philosophy at the University of Geneva took over, the number of submissions doubled again, now approximating 300 per year, while we further reduced the acceptance rate to almost 7% and the median turnaround time to under 2 months. *Dialectica* is now ranked "A" in the European Research Index of the Humanities and the Australian Research Council's ERA and has approx. 15'000 full article downloads per year. Presently, I continue my work as managing editor, while Marcel Weber, professor of philosophy of science in Geneva, and I are *dialectica*'s editors.

Other Services to the Profession

- *eidōs*, the Genevan Centre for Metaphysics: creator, coordinator and funding manager

Publications

Books

1. *How Things Are*, to be submitted early 2012 to *Mentis*.
This is a very extensively expanded (and substantially revised) version of my thesis, in seven parts (of which (parts of) the first three comprised my thesis):
 - (i) Determination – a defense and generalisation of Fine’s critique of modal accounts of essence, including an argument for non-modal and contingent concepts of essence and supervenience;
 - (ii) A Theory of Truthmaking – an analysis, and defense, of the core idea of truthmaker theory, including an argument against truthmaking necessitarianism;
 - (iii) Properties and their Kind(s) – a novel defense of the truthmaker argument in favour of properties, and an extension of it to a defense of Aristotelian universals, including an original account of determinables in terms of determination;
 - (iv) Universals – a novel account of intrinsicness used in an argument that, fundamentally, there are no relations, while there may well be intrinsic structure;
 - (v) Exemplification – a defense of the view that exemplification is a relation, that it explains the unity we observe in the world and that properties are parts of the particulars that exemplify them;
 - (vi) Generalised adverbialism – a novel account of adverbial modification and its application to the problem of temporary intrinsics and the philosophy of modality;
 - (vii) Qua qua qua – a defense that so-called ‘qua objects’ (‘Picasso qua painter’) are the referents of adverbially modified noun phrases, ontologically kosher and theoretically very useful.
2. *Introduction à la logique*, to be submitted 2012 to *Armand Colin*.
This is the first (!!) comprehensive introduction to logic for philosophers written in French. It differs from Lepage’s (1991) introduction and from the available translations of Quine (1971) by covering both natural deduction and tree methods, including correctness and completeness proofs for both propositional and predicate logic, and by paying particular (and non-partisan) attention to philosophical questions. It is ideally suited to be used in an (ambitious) logic course of four hours/semester, as they are being introduced (or, at least should be introduced) in francophone universities.
3. *Ein Dritter Blick auf Descartes’ Erste Philosophie*, to appear in the “Berner Reihe Philosophischer Studien” (Lang, Bern).
This is an extensively expanded version of my MA thesis: a critical reconstruction of Descartes’ arguments in the first three *Meditations*, defending them against their critics both of his and of our times. In particular, I argue that
 - (i) understanding the distinction between the so-called ‘analytic’ and ‘synthetic’ methods and Descartes’ use of it allows us to understand how Descartes can reasonably claim that the doubt of *Med. I* is universal and the Cogito is indubitable; that universal doubt leaves reasoning intact; that universal doubt includes claims that are performatively indubitable; that it ‘follows’ from our doubting it that we must hold it true that we think; and that the indubitability of our thinking is the ‘first’ principle of Cartesian theism;
 - (ii) a reconstruction of Descartes’ three-step skeptical argument confirms his claim that the doubt so reached is the widest-ranging possible, encompassing in particular second-order knowledge claims that lie at the heart of the Cartesian validation of reason;
 - (iii) that the Cartesian inference from thinking to existence (which I locate in the third, not the second *Meditation*) is valid and sound and substantiates Descartes’ claim that we are essentially thinking beings.
